 CODEN: MOBIBO; ISSN: 0026-8984
 DT Journal
 LA Russian
 AB The inhibitory effects of oligonucleotide derivs. on the transcription of
 virus RNA in an in vitro system and on the synthesis of virus proteins was
 studied. Oligonucleotide derivs. d(T)3, d(T)4, d(T)8, d(T)10, d(CCAAACA),
 d(TCACCCTC), d(TTCCATT), d(AATACTCT) and d(TGACCTCTTCCATT), which bear
 residues of ethidium, deuteroporphyrin and its complexes with Fe³⁺, hemin,
 cholesterol, deuteriocholesterol, estrone and naphthoquinone at the 5'-end
 phosphate and/or at the 3'-end phosphate, were studied. Unmodified
 oligonucleotides and their derivs. had a negligible effect on the
 synthesis of cellular proteins, but did inhibit the synthesis of influenza
 virus proteins. The majority of structural modifications increased the
 inhibitory effect of oligonucleotides. It was shown that the
 oligonucleotide derivs. carrying residues of porphyrin, quinone, ethidium,
 cholesterol, deuterotestosterone and estrone at concns. near 10 mM inhibit
 virus development to 50-80%. A clear inhibitory effect (20-25%) of
 deuteroporphyrin, cholesterol and ethidium derivs. was revealed even at
 concentration 0.1 mM. The results indicate that the inhibition of influenza
 virus development is dependent on the interaction of oligonucleotide
 derivs. with the transcription complex proteins.
